Adobe Photoshop Elements 5 A Software Review by Nancy Dennis Membership Chair, Sarasota PCUG, Florida <http://www.spcug.org>

Adobe Photoshop Elements 5 is a photo editing and organizing program that also includes easy to use features to backup your photos, and really fun creative ways to show off your photos to family and friends.

Adobe Photoshop is the top of the line photo program for the professionals and costs hundreds of dollars. Elements (under \$100) has many of the same features as the professional version with a lot of fun and easy features added in, making it the software choice for the non-professional user like you and me.

The software installs the Adobe Photo Downloader in your system tray and is ready instantly whenever you plug in your camera or memory card. Your photos are downloaded into the Organizer where you have easy access to them for viewing, tagging, creating collections, printing, emailing, creating all the fun projects, or switching to the Edit mode for a Quick Fix or Full Edit. Your photos are identified by Elements in Catalogs. You can have multiple catalogs for different users of your computer in the family, or say for photos that you may use for work which you want to keep separate from home photos. You can even use the Organizer to select photos to order prints online or size and send through your email client. Your photos are managed by date with a timeline across the top of the screen that is very easy to navigate when you are looking for a photo at a specific time on the calendar. The Tags and Collections feature takes a few extra minutes when you first download the photos, but sure makes it easier to select certain photos when you are ready to create a project. Tags can be given for photos of specific family, friends or places and events. Collections work in a similar fashion but could include several different people, say in a vacation.

ADOBE PHOTOSHOP ELEMENTS 5 A SOFTWARE REVIEW BY NANCY DENNIS1
WHAT'S ON THE CD OF THE MONTH MARCH 20074
LAMPPOST 82 BY JOHN SPIZZIRRI5
THE BIG RED X BY VINNY LA BASH7
HELPLINE.9

Since software packages come with little or no manuals, I find that one of my first places to explore is the Help feature. The Adobe Help Center, which is on the Help menu, includes a very extensive index of help on the program as well as hyperlinks to video tutorials on the Adobe web site. The Help Center includes a very good Search tool with easy navigation and even a Bookmark feature where you can bookmark a topic that you may want to return to again quickly. I was also offered free online tutorials from Adobe after I registered the software. Be sure to take advantage of this offer. There are eleven video tutorials that give a very good overview of everything from getting your photos into Elements to creating fun creative projects. Another quick way to get to help on any of the tools on the screen is to hover your mouse over the tool and a link appears that takes you directly to the Help Center on that tool. You will find that you don't miss the manual with this complete Adobe Help Center.

When the Elements program starts there is a Welcome Screen where you can choose to open the Organizer, Quickly Fix Photos, Edit and Enhance Photos, or Make Photo Creations. Once you decide which mode you want to begin with you can set the Welcome Screen to always open in that mode or stay with the Welcome Screen. Since you need to open a photo in order to edit it or select several photos for projects it made sense to me to always open in the Organizer mode.

With a right click of a photo in the Organizer you can select the Go to Quick Fix feature as a truly "quick fix". With this feature you are able to fix the most common problems with your photos without having to know any of the more advanced features. Now mind you the advanced features are in Elements, but you may find that you seldom need to go into that mode to get the results that you want. With Quick Fix mode you have auto buttons for lighting, color, sharpen and red eye. Then if the auto button doesn't quite get the photo like you want there are fine tuning levers to adjust to finish the job. If you just can't get the look you want you can click the Full Edit tab from this window and go into the more fully featured mode of Elements to complete the task.

Some of the new features for editing in Elements include correct lens distortion, sharpen blurred edges, fine-tuning with curves, creating dramatic black and whites and support for raw files. One of my very favorite features of Elements in the Full Edit mode is the Artwork and Effects Palette. From this palette you can pick from dozens of backgrounds, frames, graphics and shapes. Then select a style for that object from a dozen more selections and just drag and drop onto your photo. This palette includes different themes for effects, filters for effects and text styles, all applied with a double click. There is even a Favorites area where you can drag an effect that you especially liked and want to get back to quickly. A couple other favorites of mine in the Full Edit mode are the Adjust Color for Skin Tone and the Spot Healing Brush. If you have a photo where the skin color just doesn't look right you can use the Adjust Color for Skin Tone feature to quickly change the skin tone by using the eyedropper over the skin. If you want the result a little more tan or blush there are easy adjustments in that same dialog box. The Spot Healing Brush works wonders for those marks and blemishes just by clicking over the area. There is also a new feature called Magic Extractor that provides an easy wizard to extract an object (or person) from your photo. Again there are fine tuning options in this wizard if the extraction is not quite what you want. I found that this features works very well. The red eye fix in Elements 5 is by far the best red eye fix that I have used in a photo editing program. There is even an option to have red eye corrected as your photos are being downloaded from the card reader.

Elements 5 has added a Back-Up and Restore feature that allows you to back up your photo catalogs to a server online (you have to sign up for this service). The online back up service through Adobe Photoshop Services gives you a 30 day free trial. There is also a Back-Up feature that will do Full and Incremental back ups of your catalogs to a CD or DVD, another drive, or another folder on the hard drive. This feature is Wizard driven and makes this very important task quick and easy, without leaving the Elements software. This feature is right there on the tool bar along with all the other online services.

Once you have your photos downloaded, edited and backed up it is time for the really fun part of Elements 5 - creating projects like photo book pages, photo layouts, album pages, greeting cards, CD and DVD jackets and labels, slide shows, VCD's with menus, photo galleries and flipbooks for the web, photo calendars, and PhotoStamps. Most of the print projects can be printed on your own printer or ordered through an online service that can be set up with a wizard right in Elements. I didn't register for the online service but was very tempted by some of the neat projects that can be created and then sent off for printing and delivery. For instance the photo calendar can be created with 12 of your photos and then step through the wizard to choose the cover, page layout, and title, etc. Then through the wizard the calendars will be printed, bound and mailed - what a great idea for Christmas gifts!

I decided to create a slide show with photos taken at Disney World. After selecting the photos from the Organizer and then selecting Slideshow from the Create menu the wizard started with slide show preferences and then the main Slideshow Editor opens with very full featured options that are available in most of the stand alone slide show programs. This feature is like a program within a program - I am really impressed with the scope of the Slideshow Editor. There are transition options, panning and zooming, audio and narration, and adding blank sides and graphics and text.

Once you have the show the way you like it the Output feature opens another wizard for options to save the show as a file, burn to disc, e-mail the show or send to a TV. The wizard works great burning to a Video CD format. (The only option that I would like to see added would be to burn to DVD.) If you have several slide shows that you would like to burn to one CD you can select the Create a VCD with menu and the wizard will allow you to add multiple slideshows and then create a menu before burning.

The next project I tried was to create a Photo Gallery. With the same Disney photos selected the Photo Gallery opens a wizard with three types of galleries; Web Galleries, Animated or Interactive. With Web Galleries chosen the wizard asks for arrangement of the photos on the page and a style with both options showing thumbnails of how your choice will look. Next the wizard opens a dialog window with more options to customize, such as Gallery Title and Slideshow duration and effects. You then can select where to Share the gallery; either choose Do Not Share (which saves to your hard drive), Photoshop Showcase (more about this later), My FTP Site, or CD. I also tried the Animated and Interactive galleries with the same photos. The wizard makes creating these very complex shows a breeze. If you don't know how to publish to your web space a dialog box offers simple steps to help with that task, or you can register and sign on to the free Adobe Photoshop Elements Showcase feature. This is an online community for users of Elements to upload and share their photos and galleries.

Each project that you create and save is added to the Organizer at the top. If you want to edit a project you just double-click the project file and the wizard that was used to create it opens. All of the print projects like the Photo Book Pages, Photo Layouts and Album Pages, are saved (with multiple pages when applicable) with a .pse extension. The print projects are wizard driven and offer step by step selections for size, layout, theme and then additional options depending on the project chosen. I decided to make a print project of a CD cover and label for the Disney slide show that I created earlier. The wizard walked me through the entire process opening Elements in the Full Edit mode with my selected photo and all the layers in the layer palette created - it truly seemed like magic. Since you are left in this mode you can then adjust or fine tune the project before saving and printing it.

One feature that I was not able to try but may be of interest to some reading this review is the ability to download and upload photos from a mobile phone.

I highly recommend Adobe Photoshop Elements 5. There is an upgrade rebate in the box of \$20, so if

(con't on page 4)

you are using an older version you can take advantage of that. The price today at [http://www. Amazon.com](http://www.Amazon.com) is \$69.99 with free shipping and your \$20 rebate makes the total price \$49.99. There are other special offers at local stores and online. Visit Adobe's web page <http://www.adobe.com> for system requirements.

by John Spizzirri

Steve Ballmer

(AKA Monkeyboy <http://video.google.com/videoplay?docid=1274983729713522403>), Microsoft's (MS <http://www.microsoft.com/>) Chief Executive Officer CEO, admits in Computer Business Review Online that "a new Windows release is primarily a chance to sustain the revenue we have". Does this mean that Vista was produced just to enhance MS revenue? He also admits that a new Windows release prevents market share loss to Linux and Mac. The article is at http://www.cbronline.com/article_news.asp?guid=EF384766-9CD0-4B50-B783-1CC24121E632. Ballmer noted that there has been a market share loss to Apple "because they've had the sexiest high-end notebooks in the marketplace".

Mark Minasi, a reporter for Windows IT Pro Magazine

<http://www.windowsitpro.com/> and a author of many books

(http://www.amazon.com/b/ref=dp_brlad_entry/104-0191894-7986363?ie=UTF8&node=565694), asks in an article titled Where's the Response to "Get a Mac"? why has MS failed to answer Apple's (<http://www.apple.com/>) aggressive television advertising that suggest that Mac's are superior to MS Vista. You can watch the commercials at <http://www.apple.com/getamac/ads/>. I would suggest that MS cannot answer the Mac ads because there is nothing new or improved in Vista other than significantly higher hardware requirements than previous Windows versions. You cannot read the article on line because Windows IT Pro requires that you subscribe to the magazine to read the articles.

Satellite navigation (satnav) systems do not always work correctly. If you have one in your car, take a look at what happened to a woman in England that followed the directions given by the satnav. Her \$186,000 Mercedes SL500 (<http://www.mbusa.com/models/main.do?modelCode=SL500R>) is a total loss. Her satnav told her to ford a small river in farming country. The car was swept away in the rain swollen river. The story is in the Daily Mail at http://www.dailymail.co.uk/pages/live/articles/news/news.html?in_article_id=442730&in_page_id=1770 Do not do everything you are told to do. Resist authority.

Associated Press (AP) reporter Lara Jordan reported that the Department of Justice

(DOJ <http://www.usdoj.gov>) did an audit of the Federal Bureau of Investigation

(FBI <http://www.fbi.gov>). The audit was to determine if the FBI violated the already liberal provisions of the Patriot Act. Inspector General Glenn A. Fine conducted the audit. Jordan wrote, "He found that agents sometimes demanded personal data on people without official authorization, and in other cases improperly obtained telephone records [wire taps] in non-emergency circumstances." FBI Director Robert S. Mueller accepted responsibility for the actions of his employees. He said that no one was harmed. I do not know about you but I consider a violation of my rights as harmful! Attorney General Alberto Gonzales stated that there may be prosecutions of FBI agents and lawyers who abused the Patriot Act. So he will do exactly what the Army did after the Abu Ghraib. I liken this to Captain Renault's statement in Casa Blanca, "round up the usual suspects". Fine's report(s) is/are on the CD of the month. Jordan's article is here;

<http://apnews1.iwon.com//article/20070310/D8NP932O0.html>. The Electronic Privacy Information Center (EPIC <http://www.epic.org/>) and the American Civil Liberties Union

(ACLU <http://www.aclu.org/>) have been sounding the alarm since the act was first proposed. The act was proposed in October of 2001. Attorney General Ashcroft told Congress that if they did not pass the bill, they would be responsible for additional attacks. No one seemed to remember the MASSIVE FAILURE of U.S. intelligence prior to the 911 attacks even with Carnivore ([http://en.wikipedia.org/wiki/Carnivore_\(FBI\)](http://en.wikipedia.org/wiki/Carnivore_(FBI))) and ECHELON (<http://en.wikipedia.org/wiki/ECHELON>). The ACLU, not my favorite organization, has called for the repeal of the Patriot Act citing the exact abuses (<http://www.aclu.org/safefree/nationalsecurityletters/28968prs20070309.html>). The ACLU says the Bush administration cannot be trusted with the Patriot Act. I would go beyond their myopic reaction. I think no administration can be trusted with the provisions of the Patriot Act. EPIC has filled numerous Freedom Of Information Act (FOIA) requests exposing FBI abuse of the act. Even the American Bar Association (ABA <http://www.abanet.org/>) has worked with EPIC and the ACLU to curb the abuse of the act.

During the fund raising weeks of your local PBS television stations (<http://www.wttw.com/> and <http://www.wycc.org/> in Chicago) you are subjected to numerous claims regarding health. These usually involve reading the guest star's book or using the guest star's food supplements or devices. It is sometimes difficult to determine who is a charlatan and who is telling the truth. Psychologically, anyone seen on TV in a non-confrontational circumstance has an air of truth surrounding them that may or may not be deserved. Some people have made their career by appearing on PBS TV. A method of finding information on various speakers is to check Quackwatch at <http://www.quackwatch.org/> . Quackwatch has many useful articles such as; "Seven Warning Signs of Bogus Science" and "Why Health Professionals Become Quacks", that explain what to look for. There is also a search feature that can be use to search for products or people.

You have probably been bombarded with the global warming arguments since the Academy Award was given to Al Gore for his documentary. The winning of the Oscar is used as a bludgeon to convince us that man made global warming exists AND that the only way to protect the Earth is to follow the methods described by Gore to end it (namely the provisions of the Kyoto Protocol). If you are unfamiliar with the Kyoto Protocol, the full text is here; <http://www.cnn.com/SPECIALS/1997/global.warming/stories/treaty/> . It is an interesting read. As for the Oscar being used to promote man made global warming, I think you only have to look at who has won the Oscar in the past and for what films to see that the Academy has an agenda. The agenda, whether you agree with it or not, should be recognized for what it is. It is a method to gain public support for the cause. Some people think that President Bush is against the idea of man made global warming and the Kyoto Protocol. He talks a good line, but the fact remains that if he were against it, he could begin a program of firing those people within his administration that openly and sometimes flagrantly support the belief that man made global warming exists and that something can be done about it. These people work for him. It is very surprising to me that with all the media support for the Kyoto Protocol that it has not been ratified by now. It has been 10 years. It would seem that those is Congress who would be held accountable (voted out of office) if the Kyoto Protocol was implemented in this country, are the ones who point the finger at the President and "big oil" as the culprits who prevent the protocol from being voted upon. If there is a 'consensus' that the protocol should be implemented, then the only ones responsible are Congresscritters. Perhaps "big oil" contributes too much to each of their campaigns for re-election for them to follow their conscience. On the other hand, the scientific community which is presented (by the mass media) as unified in the man made global warming crusade has cracks. Thousands of scientists have signed the Global Warming Petition (<http://www.oism.org/pproject/s33p357.htm>) that states there is "no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gasses is causing or

will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate". The question comes to my mind is why are petitions (for and against) used to determine scientific fact? Are not facts discernible independently of any agenda?

Between you, me and The Lamp Post that's all for this month.

The Big Red X

Written by Vinny La Bash

Member of the Sarasota PCUG, Florida, <http://www.spcug.org>

Email, along with the spreadsheet, is one of the greatest computer applications ever developed. Along with its usefulness are a few minor, but irritating inconveniences. The one we'll address in this article is the frustration with observing a red X where an image should appear.

There are several possible causes for pictures failing to materialize. They are not particularly difficult to correct, but the method is far from obvious. Start by right-clicking the red X and from the popup menu select "Show Picture". If this works, consider yourself blessed. More likely is that either your email setup is not allowing the picture to be viewed or the sender's options are not allowing the picture to be sent. Let's make sure that your setup isn't causing the problem, and then we'll figure out what to do with the sender.

If the problem is at your end, it could be caused by having Internet Explorer's email settings too restrictive. To reset the default settings for Internet Explorer 6.0 open Internet Explorer, click Tools from the top menu bar, and select Internet Options.

1. Click on the General tab to make sure it's active.
2. Click Delete Files.
3. Check Delete All Offline Content, and click OK.
4. Click the Delete Cookies button, and click OK.
5. Click the Settings button.
6. Set cache to 25 MB or less, and select Every Visit to Page, then click OK.

Next, make the Security tab active by clicking on it. There are four zones listed on the security tab: Internet, Local Intranet, Trusted Sites, and Restricted Sites.

1. Click Internet.
2. Click the Default Level button.
3. Repeat the steps for each of the remaining zones.

Third, click on the Privacy tab, and click the Default button. If the Default button is grayed out, ignore this step. Now click the Connections tab.

1. Click the LAN Settings button.
2. Make sure nothing is checked, and click OK.

Last, click on the Advanced tab.

1. Click Restore Defaults.
2. Click Apply and OK.

Internet Explorer 7 is similar, but there are enough differences to warrant its own set of instructions. Open Internet Explorer, click Tools, and select Internet Options.

First, look at the General tab.

1. Click the Delete button.
2. The Delete Browsing History dialog box appears. Click the Delete Files button.
3. Select Yes in the confirmation box.
4. Repeat step 2 for the Delete cookies, and Delete history buttons.
5. Click Close.
6. Click the Settings button in the Browsing history section.
7. Select "Every time I visit the webpage," then set the "Disk space to use" value to 50 Megabytes or less.

(con't on page 8)

8. Click OK.

Next, click the Security tab. There are four zones listed on the security tab: Internet, Local Intranet, Trusted Sites, and Restricted Sites.

1. If the Set all zones to default level button is not grayed, out click it and you're done with this section. Otherwise continue with step 2.

2. Click Internet.
3. Click the Default level button (if it is not grayed out).
4. Repeat the steps for the remaining zones.

Click on the Privacy tab, and click the Default button unless it's grayed out. Then click the Connections tab.

1. Click the LAN settings button to activate another dialog box.
2. Make sure nothing is checked, and click OK.

Finally, click on the Advanced tab.

1. Click the Restore advanced settings button. Don't, repeat don't click the Reset button as that will delete any forms and passwords saved through auto-complete.

2. Click Apply and OK.

That takes care of your browser. If you're using Outlook or Outlook Express, you need to check several more options that control how images are received or sent. There are two ways to send pictures in Emails. You can imbed the picture in the email or you can send the picture as an attachment. Whichever way you choose, you need to set your email client so it can handle pictures, and you do that by setting your email to work in HTML format. We'll start with Outlook Express and finish up with Outlook.

We'll make a big assumption that all of your recipients are set up to receive their Email in HTML format. You need to make sure that you have Outlook Express set up to send Email in HTML. Service Pack 2 should be installed on your system. Because of its extra security features, you need to avoid blocking attachments when you send or receive email.

1. Open Outlook Express, go to the Tools/menu, and click "Options",
2. Click the "Send" tab, and then select "HTML" as the format to send mail.
3. Click the Button to the right that's named "HTML Settings", and put a check in the box that says "Send Pictures with Messages". Be sure that "Quoted Printable" is the selected in the "Encode text using" box.

4. Click OK.
5. Click the Read tab.
6. Confirm that the "Read all messages in plain text" is not checked.

Your machine is now setup to correctly send and receive images. If people who are receiving your email complain about red Xs, send them these instructions. If you want to check out your system, try sending some emails to yourself.

If you're using Outlook, perform the following check.

1. Open Outlook and select Options from the Tools menu.
2. Select the Mail Format tab.
3. In the "Message format" section select HTML from the drop down menu.
4. Click the Internet Format button
5. In the HTML options section, confirm there is no checkmark in any of the boxes in the dialog box.
6. In the Outlook Rich Text options section, select "Convert to HTML format" from the drop down menu.
7. Click OK to save the settings.
8. Click OK to exit.

Other possibilities that could prevent pictures being displayed in your email are your anti-virus and firewall settings. You may need to relax the security settings on these programs. We can't provide instructions for this because we don't know whose software you're using. You may need to contact the producer of the software for information.

If you create and send an email with a photo image or forward an email with a photo in it and the recipient gets a red X instead of the picture, you can be fairly confident that their email, firewall or anti-virus setup is preventing the picture from being seen. Send these instructions to them.
