CAEUG Picnics 2000-2010

I started as chairman of picnic committee with Roger Kinzie in March 2000. The picnics have been held at Seven Gables Park in Wheaton on the last Saturday of August 2000-2003. We moved the picnic date to last Saturday of June in 2004, this solved our yellow jacket problem.

A table of picnic attendant follows:

Date	Sign up sheet #	Picnic sign in sheet#	Notes
8-26-00	23	20	OK for my first picnic
8-25-01	33	30	Rainstorms but picnic was ok
8-24-02	44	37	Good weather & picnic
8-23-03	32	25	ok
6-26-04	32	30	Fine no yellow jacket problem
6-18-05	33	33	Great weather & picnic
6-24-06	33	31	Held at Northside Park Wheaton ok
6-23-07	30	25	Back at 7 Gables Park ok
6-28-08	25	23	Excellent weather & picnic
6-13-09	26	24	Rained but picnic was ok
6-19-10	27	26	Excellent weather & picnic

Our picnic have been fun because everyone helps on picnic day. I would like to thank the following people for their help: Nancy Kinzie (My picnic Coach),

(con't on page 2)

TABLE OF CONTENTS

CAEUG PICNICS 2000 - 2010	.1
CD OF THE MONTH LIST	.2
BEWARES! BY BERRY F. PHILLIPS.	.3
LAMPPOST 117 BY JOHN SPIZZIRRI	.5
NYBBLES AND BITS BY JOHN PEARCE.	8
HELPLINE.	.9

Al Skwara for getting picnic site and bringing the pop, Maribel Stillman for table flower arrangements a great touch, Lynn Johnson for handling of the raffle with style. John Spizzirri for guidance and getting the food 2000 - 2004. Last but not least Kathy Groce for her excellent directions in our ARI newsletter.

Thanks to everyone for bringing raffle prizes, food dishes to pass around and helping.

Roger Kinzie & Michael Goldberg, picnic chairmen

July 2010 CD of the Month

AdobeAir -	Development tool for web sites
AdobeFlashPlayer -	Updated flash player
ARI -	July newsletter
AudioChaos -	Sound effects generator
AVGLinkScanner -	Scans URLs for malicious sites
cCleaner -	Updated HD cleaner
CDburnerXP -	Updated CD DVD burning software
CDOMlists -	Lists of past CDOMs
CodySafe -	Portable Applications menu
ComboFix -	Removes Malware, Spyware
CopyWipe -	Utility for copying or securely overwriting (wiping/erasing) entire hard drives
CrystalDiskInfo -	Hard drive monitor
DBAN -	Hard Drive Disk Wipe and Data Clearing boot disk
Defraggler -	Updated defrag program
DigitalImageTool -	Batch process images for resizing methods, rotation, cropping, scaling and conversion
Doppler -	Updated podcast downloader
DrivelImage -	Program for imaging and backing up partitions and logical drives
Eraser -	Completely remove sensitive data from your hard drive by overwriting it several times
fCleaner -	Updated HD cleaner
Firefox -	Updated browser
Foobar -	Freeware audio player
FoxitReader -	Updated pdf reading file
FreeEasyCD-DVDburner -	CD DVD burning software
FreeFLVconverter -	Converts FLV files to other formats
FreeMP3WMAConvert -	Converts MP3 and WMA files to other formats
FreeVideoConverter -	Converts one video format to another
GlaryUtils -	System tools and utilities to fix, speed up, maintain and protect your PC
GomPlayer -	Audio and video player
GoogleChrome -	Updated browser
GoogleEarth -	Google Earth installer
gPodder -	Podcast downloader
HiJackThis -	Updated generator of an in depth report of registry and file settings
HomeBank -	Analyse and manage your personal financial accounts
i-Doser -	Binaural beats sound player
IrfanView -	Updated picture file viewer
ISORecorder -	Creates CDs and DVDs from ISO files
JavaRuntimeEnvironment -	Updated JAVA
KillDisk -	Software that allows you to destroy all data on hard and floppy drives completely

Lightscreen -	Screenshot app packaged as a portable app
Malwarebytes -	Updated malicious software detector
MemberContributions -	Things e-mailed to me from members
MobaLiveCD -	Freeware that will run your Linux LiveCD on Windows
MP3MyMP3 -	Updated sound recorder
NeroBurnLite10 -	Updated CD DVD burning software
NotepadPlusPlus -	Updated text editor
OldTimeRadio -	Old time radio broadcast
Opera -	Updated browser
Picasa -	Updated picture viewer / editor
Prime95 -	PC stress tester
RealPlayer -	Updated audio player
Recuva -	Updated file recovery program
RemoveFakeAntiVirus -	Remove the most popular fake antiviruses
RipMyCDRom -	Conversion of Audio CD's to MP3
SeaMonkey -	Updated browser
SIW -	System Information for Windows tool that gathers detailed information about your system properties
SnapShot -	No nonsense screengrabber or screenshot taker
Speccy -	System Information tool for your PC
SqirlzMorph -	Morph from one image to another
SureDelete -	Program deletes a file, then wipes and removes the data left over
Thunderbird -	Updated e-mail client
Traceless -	Program clears temporary Internet files, history, cookies, and recent documents
TweakUAC -	Turns UAC (User Account Control of Windows Vista) on or off
VirtualCloneDrive -	Program to mount ISO files on the PC as if they were CD DVD drives
VistaTweaker -	Utility for tweaking and optimizing Windows Vista, 32-bit & 64-bit.
VLC -	Updated audio and video player
WinAmp -	Updated audio player
WindowsMediaPlayer11 -	Latest Windows Media Player
WipeDisk -	Overwrites HD info sector-wise, from the first sector of the disk to the last one
WirelessNetView -	Monitors the activity of wireless networks around you

BeWARES!

By Berry F. Phillips

This article has been obtained from APCUG with the author's permission for publication by APCUG member groups; all other uses require the permission of the author (see e-mail address above).

The wares have often perplexed computer users with numerous decisions regarding software. The multitude of wares have been even more confusing. Comware is commercial software which generally has more "bells and whistles" but requires the highest financial expenditure without the option to try the software in advance. Trialware is usually characterized on the Internet as a free download for a limited time but requires a purchase to continue using the software. Shareware is also free to download but often has features turned off or has an expiration date unless you purchase the software. Trialware and Shareware do offer an opportunity to use the software before making the decision to purchase. Freeware is free for

personal use on the Internet but it may contain adware, viruses, or be poor software. Further, the marketing promotion of the wares can be even more misleading, causing you to download and then delete software that you thought was freeware when you discover it is, in fact, pay ware.

The world of wares can be very frustrating as well as expensive to the computer user. One can spend considerable time, frustration, and even expense downloading and deleting various wares on the Internet. Beware, retailers will not accept returned comware after it has been opened for a money back guarantee. Relax, my holiday gift to my readers is a solution to the problem that I have used for several years, saving me considerable time and money! However, I have had to endure personal comments from some of my fellow computer users that I am “cheap!” Since my ancestry is Scottish who are known for being thrifty, I do not consider that comment an insult. However, I do prefer the use of the word “conservative” to the rather blunt, “cheap.”

Excluding my operating system, I have nothing but freeware downloaded from the Internet on my system! Aha, you are thinking, but what about adware, viruses, or poor freeware, and the considerable time in downloading and deleting it takes to find the best freeware on the Internet? There are several sites that contain only freeware. However, I recommend Gizmo’s Freeware site because I have used it for several years and found it to be very effective in reviewing freeware and efficient to use in going quickly via links to safe and secure freeware sites for downloading. I am reluctant to recommend other sites that I have not used for purposes of this article.

Gizmo’s Freeware is easy to use and makes it very simple to locate the best freeware on the Internet because it is extensively reviewed before it is recommended. Until July 2008 Gizmo was the editor of “Support Alert”, a highly recommended technical newsletter that was distributed to over 150,000 subscribers. The site evolved from his highly popular list of the “46 Best-ever Freeware Utilities.” The site grew well beyond 46 and reached the point that it could not be maintained by one person. Today, the site has grown into a kind of Wikipedia for Freeware utilizing contributions of dozens of volunteer editors who edit and moderate suggestions from thousands of site visitors. As a result, the range of free software covered by the site is ever increasing and the quality of the reviews are ever improving. Gizmo’s Freeware has, in a real sense, become the “Wikipedia for Freeware.” I strongly suggest you check your freeware on your system against the recommendations of the best and consider downloading the best.

The primary purpose of Gizmo’s Freeware is to make it easy to select the best freeware product for your particular needs. The best freeware programs are as good or better than their commercial counterparts but finding the most appropriate programs can be challenging. There are dozens of freeware download sites but few of these actually help you select the best program for your needs. The site has no downloads just honest advice and useful guidance. Links are provided where you can safely and securely download the product you want. Furthermore, you will know that what you have selected is the best available. Gizmo’s Freeware is easy to use and will save you time, money, and lots of frustration!

**BE SURE TO BOOKMARK GIZMO’S FREEWARE BECAUSE YOU WILL USE IT
FREQUENTLY TO SOLVE PROBLEMS — SAVING YOU MONEY, TIME, AND LOTS OF STRESS:**

LampPost 117
by John Spizzirri
July 23, 2010

I went to the DuPage County Fair **(1)** this past week. The usual peddlers filled the booths. The established political parties (Democrat **(2)**, Green **(3)**, Republican **(4)**) were there as well as the Libertarian Party **(5)**. The Baha'i Faith **(6)** was represented but I found no other religions or churches were there. This is the first year in a long time that all the booths were not filled. I stopped by the DuPage County Farm Bureau **(7)** and talked to the 'farmer' staffing the booth. I asked if there were actually any farms in DuPage County other than the 'farms' (Danada model and St. James) preserved by the DuPage Forest Preserve district **(8)**. He said no. I was surprised that he was so forthcoming. He told me that there are about ten farmers that farm small patches (under 40 acres) here and there in the county but that most of them live outside of DuPage. It made me wonder where all the 4H **(9)** animals come from. I went to the DuPage Forest Preserve district booth and found that it was primarily being used as a political campaign booth for the incumbents. It was heartwarming [not] to see my tax money dispensing campaign literature for Dennis Clark **(10)**, Hilary Denk **(11)**, Eric Bergman **(12)**, and Shannon Burns **(13)**. They handed me a small shopping bag labeled 'DuPage Forest Preserve' and 'Elect' followed with a list of their names. I am not sure if the candidates produced and paid the bag or the district. At another booth I thought it strange that an Islamic woman wearing a plain black hijab was selling Avon **(14)** products. I stopped at the Cook DuPage Beekeepers Association **(15)** booth. They were selling local honey for about \$5 per pound. One of our members, Jim Snyder, is a bee keeping member of the association. The local honey was labeled that it came from Harvard, Illinois **(16)** in McHenry County. The previous week I checked the Kane County Fair **(17)**. By comparison, it seemed much more vibrant.

The government is putting out new information about something we should be afraid of **(1)**. Binaural beats **(2)** sometimes called digital drugs are going to "...entice young people down a slippery slope...", whatever that means. Allegedly, hearing binaural beats will alter brain waves causing a "drug-like euphoria" and the pursuit of "mood altering substances". I wonder

if listening to music would cause the same effect. I listened to some binaural beats **(3)** with ear buds and found no particular effect. Some entrepreneurs have found an ingenious way to make money by selling wave files, courses, and religious experiences that can be created or downloaded for free **((4) thru (9))**. They charge from \$12 and up for these files and courses. Binaural beats have to do with the way waves (audio and radio) interact with one another. Radio waves of two or more different frequencies interact with each other creating a third frequency called a beat frequency. The super-heterodyne radio receiver **(10)** uses this interaction to produce sound and video (AM radio and television). Audio waves (sound) are interpreted by the brain in the similar way radio waves interact. Two audio tones (one in the left ear and the other in the right ear) cause the brain to 'hear' a third beat frequency. According to the hype, the beat frequency alters brain waves. Maybe it only affects teenagers or maybe this is total nonsense. i-Doser is included on the CD of the Month for those who wish to try it. It comes with two free 'doses'; alcohol and content.

The Higgs Boson **(1)** is a sub atomic particle that is predicted to exist in the 'standard model'. It has never been detected. It is alternately known as the god particle. It is the reason all matter has mass. There are competing theories that do not include the Higgs Boson. The Daily Telegraph **(2)** reported a rumor that on July 27 at the International Conference on High Energy Physics (ICHEP **(3)**) in Paris the physicists from Fermi National Accelerator Laboratory in Batavia (FNAL **(4)**) would make an announcement about the Higgs Boson. A FNAL spokesperson has since debunked the rumor. The Large Hadron Collider (LHC **(5)**) operated by the European Organization for Nuclear Research (CERN **(6)**) in Geneva, Switzerland is the largest high energy particle accelerator. Physicists at the LHC have detected the 'track' of what they think is the Higgs Boson. One of the bright musical physicists have set the 'track' to music. What does the 'god particle' sound like? Check this site for the music of the sub atomic particle **(7)**.

You may have listened to an audio book and liked the convenience. The only problem is that a book on CD is expensive sometimes more costly than the paper book. An alternative is the MP3 audio book. The most famous company that provides these files is Audible.com **(1)**. The only problem with that is that the books are still expensive and you have to pay a

monthly membership. There are plenty of older books some of them classics, that are actually free in audio format. One place to look is at Open Culture (2). Another place is the Gutenberg project (3). Some sites that a limited selection of titles are Audio Books for Free (4), LiteralSystems.org (5), and LibriVox (6).

A club member wrote me about an e-mail he received regarding the difference between http and https. I have written about this in the Lamp Post in the past. I will write about it again as a refresher. The https is purchased from security companies that provide the SSL service (1). SSL stands for Secure Socket Layer. SSL provides a level of security but is by no means fully secure. Some companies that provide the service are Entrust (2), Verisign (3), and Thawte (4). The various browsers provide a padlock icon to show that the SSL is active.

Browser	Location of icon
Safari	right hand side of the address bar
Firefox	lower right hand side of the information bar
IE8	right hand side of the address bar
Chrome	left hand side of the address bar
Opera	right hand side of the address bar
Seamonkey	lower right hand side of the information bar

Depending on you eyesight the icon might be more visible than the s at the end of http. Always remember, a person intent on criminal activity will find a way to do the deed. SSL stops casual criminals but not serious criminals. You may, from time to time, come across web sites that have let their SSL service lapse. A notice comes up in most browsers that the SSL has expired and asking if you wish to continue. It is an additional warning that the site may have security problems.

Facebook (1) recently crossed a milestone. The 500,000,000th user of face book signed up this month (July 2010). With the population of Earth at just under 7 billion, one half billion users is a phenomenon that has no precedent. Considering that most of the Earth population do not own a computer and the people with computers account for most of the spending on consumer goods this historic event means a huge amount of power is currently concentrated in hands of just a few people that control Facebook.

- 1) <http://www.facebook.com/>

Between you, me and The Lamp Post that's all for this month.

Nybbles and Bits

By John Pearce, Chair, WebBoard, Pikes Peak Computer Application Society, CO
February 2010 Bits of Bytes, Newsletter of the P*PCompAS
<http://ppcompas.apcug.org> Glenihan (at) comcast.net

This article has been obtained from APCUG with the author's permission for publication by APCUG member groups; all other uses require the permission of the author (see e-mail address above).

Last month, I mentioned an article in TechRepublic regarding removing old drivers from your system. Little did I know that issue was going surface in my notebook computer that I upgraded to Win 7. The touchpad on my notebook computer has a vertical scroll area at the right side of the pad. I had no problems using the vertical scroll until I upgraded to Win 7 at which point, it stopped working.

I ignored the problem until just after the January PCompAS meeting. When I started to investigate and tried to access the settings for the touchpad, there was a pop-up dialogue box telling me that IntelliPoint was blocked from running because of known incompatibilities with Win 7. It took me a few minutes to remember that I had bought a USB mouse and installed Microsoft IntelliPoint software shortly after purchasing the notebook. I had used the USB mouse until I bought a Logitech wireless mouse a year or so ago.

My first thought was to just remove the offending software. Good idea except there was nothing shown for IntelliPoint in the Programs and Features list and nothing for the USB mouse in the Mice section of Device Manager. Connecting the USB mouse made it appear in Device Manager and caused IntelliPoint to appear in the Programs list. I thought I was close to being done. Surprise, surprise! Trying to perform an uninstall of the software produced the pop-up about IntelliPoint being blocked. I wondered how you could uninstall it if it was blocked from running. This time the pop-up dialogue box provided a link to an update and I performed the update. After the IntelliPoint update completed, the vertical scroll on the touchpad worked correctly. However, I decided to remove IntelliPoint because I no longer use the USB mouse and could not think of a good reason to leave the software installed.

This is the first time I can remember where it was necessary to upgrade software just to remove it. I expect the Win 7 upgrade did not upgrade the IntelliPoint software because the USB mouse was not connected at the time the upgrade was performed. Maybe next time I will remember that USB devices should be plugged in during an upgrade and to make the related software and drivers visible. Even better would be to remove old drivers as TechRepublic suggests.
